

1. I accidentally deleted something and nothing was working for a minute but I think I have it fixed now. I have invited Dr. Lewis to the rep.
2. Git stash says “No local changes to save” but git log – all –online produces “465cb38 (HEAD -> main) Add startercode.zip to repo”. I’ll be honest, I’m still not entirely sure I’m doing this right. I haven’t used github properly in a couple years. Did not expect to have this hard a time getting set up. Git stash pop says “No stash entries found”.
